

STATEMENT ON CHEMICALS, REGULATIONS AND STANDARDS

Status of Sirmax thermoplastic compounds referenced to Kärcher standard Kän 050.032 - July 2016

With reference to our product

➤ ***ISOFIL – all grades, excluding the flame retardants****

according to our actual knowledge and information, we declare that for its production the substances reported in Kärcher standard Kän 050.032 - July 2016 and "supplementary requirements" are not used or intentionally added as components.

For this reason, we suppose them not to be present, and no tests are performed for the detection of these substances.

We wish to clear that phthalates can be present in traces, typically below 15ppm as residues of the polypropylene catalytic system.

*Flame retardant grades: They are recognizable by the presence of one of the following characters: V0 or V1 or V2. They are formulated usually with antimony trioxide and bromine based flame retardant, with the exclusion of PBB and PBDE.
